For Immediate Press Release

Statement of Harrison E. Livingstone concerning the Boston Globe article by Ben Bradlee, Jr. on June 21, 1981 concerning the assassination of President Kennedy.

I motivated the Globe to investigate evidence concerning the wounding of President Kennedy. First in 1980 I spent ~~in~~ 1980 to Timothy Ireland testimony I took from a number of the doctors in Dallas in 1979 upon first seeing copies of the autopsy photographs. I assembled ex[illegible] evidence in which the President was shot in the front of his head, causing the back of his head to be blown out. All of the Parkland doctors told the Warren Commission that the back (occipital) of the head was blown out. This "large hole in the back of the head" does not show in the autopsy photos.

When these photos were first shown to the doctors and nurses in 1979 by myself and the Baltimore Sun every single witness denounced them.

In fact, the Globe found only one witness, Dr. Grossman, who said the photos were consistent with the wounds as he recalled them. Dr. Grossman was (?) not present in the TX for more than a moment and could not be a good witness.

The Globe called ~~them~~ Steve Banks at Dr. Ev[illegible] in 1980. upon their return from Dallas and gave their results to both Steve Banks and later Dave, respectively. They stated that our doctors reversed what they told me, ~~they~~ now say the pictures were consistent. There were Drs. Jenkins and Giesecke. I was unable to reach Jenkins. Giesecke wrote a letter to me and reaffirmed that the large hole extended into the occipital area. Jenkins could not be reached.

The Globe stated that a very strong witness, Dr. Pa[illegible] Peters was no longer certain where the big hole was. I called him for several hours & talked to Dr. Pet[illegible] stated ~~Andrews~~ that he wanted to help the Globe but the wound was in the back of the head. I cited Dall[illegible] tried to get him to mark the wound, and he said

James Fetzer

he would give them a one centimeter or a millimeter or two" to the right that the large hole (as he would have it) was still in the back of the head, indicating a Bantam shot.

I taped both Drs Jenkins and Ciesielski (of Reiji letters and taped the in the JFK Library and their emphatic statements that there was a large hole in the back of the head and that the photos are inaccurate cannot be misinterpreted.

I outlined to the Globe a plan whereby they could obtain access to Peat tapes, photographs, which they followed. Instead of showing the photos to the doctors as I asked - they have never been allowed to see them - the photos were shown to a panel of "experts" none of whom who had been connected to either CBS or ITEK. Robert Groden who was also on the panel and who had detected evidence that the autopsy photos were forged states that the Globe refused to conduct the tests he believed would have proved the forgery. For a small sum of money and if he had the time, Groden would like to conduct these tests. Groden states that he has done work which in stereo which demonstrates conclusively that forgeries can maintain stereo scopic integrity.

From the start my relations with the Globe were tense and perilous right from the start. Sam Peat, Ben Bradlee, and the reporters I was dealing with lacked sincerity and integrity and I attempted to abort the project. They migrated to persons at Harvard that they wanted to go ahead & be interviewed. Reluctantly I agreed. I briefed them and prepared them to go to Dallas, though I had heavy doubts.

While I was preparing the Globe team in the case, they brutally mistreated me. I was cursed, abused, and lied to. I felt that they had other conclusions already and this was why they could mistreat me. For instance when I showed them Dr. Carl Peters' letter which rejected the official autopsy picture and insisted there was a large hole in the back of the head, they chorused just questioning but violently attacked both the letter and me. [illegible]

When they later went to see Dr. Peters, he reported to me that they did all they could to change the position of the wound. It was clear that they had to discredit him because he sent it in writing. He resisted.

The Globe then singled out the doctors whom I had seen and determined to change their testimony, saying to me and others in violation of the slander laws - it being true that there was nothing on the tapes that I had falsified the transcripts, and that I had lied. The SUN, which has the tapes, charged the Globe that quite accurately was true. The Globe then simply falsified what these doctors told them.
